

# How to Upload the Easy Way

To start with there are two main ways of uploading. The first is to download a torrent from another site then transfer all of the premade information about it to this site. The other is to make your own torrent page completely from scratch. You will probably have to do most of it from scratch anyway as a lot of torrent sites, especially public, don't bother too much about torrent info in which case you will need this guide if you are unfamiliar with how to upload in the first place.

So, the first and easiest way is the pre-made torrent upload page where everything you need is already on the original upload page and all you have to do is create a new .torrent file and copy all of the information over to our sites upload page. There will probably be slight differences but not much usually, for instance, below is the upload page from a different tracker for the film Elysium that I uploaded to the site this morning. Then after it you can see the upload page for our site with the same information just copied over. The only extra information I needed to get was for the database numbers (IMDB, TMDb etc.) So I downloaded the torrent from their site, then when it finished downloading I created a brand new .torrent file for it with the Aither tracker and then copied all the relevant information over which was; the mediainfo, the description which in this case was just the film description and there were 3 screenshots premade, so I just uploaded them to a different image hosting site so I could create thumbnails and then used them for the screenshots. That was it, it was done in a matter of minutes.

The site I got the files from:

# How to Upload the Not Quite So Easy Way but Still Not Hard Way!

This way is for when you are making your own torrent from scratch or if there isn't any useful information from the site you have downloaded the files from. It may seem a little daunting at first but once you have done it a few times you will only take an extra 60 seconds doing it this way to the first way!

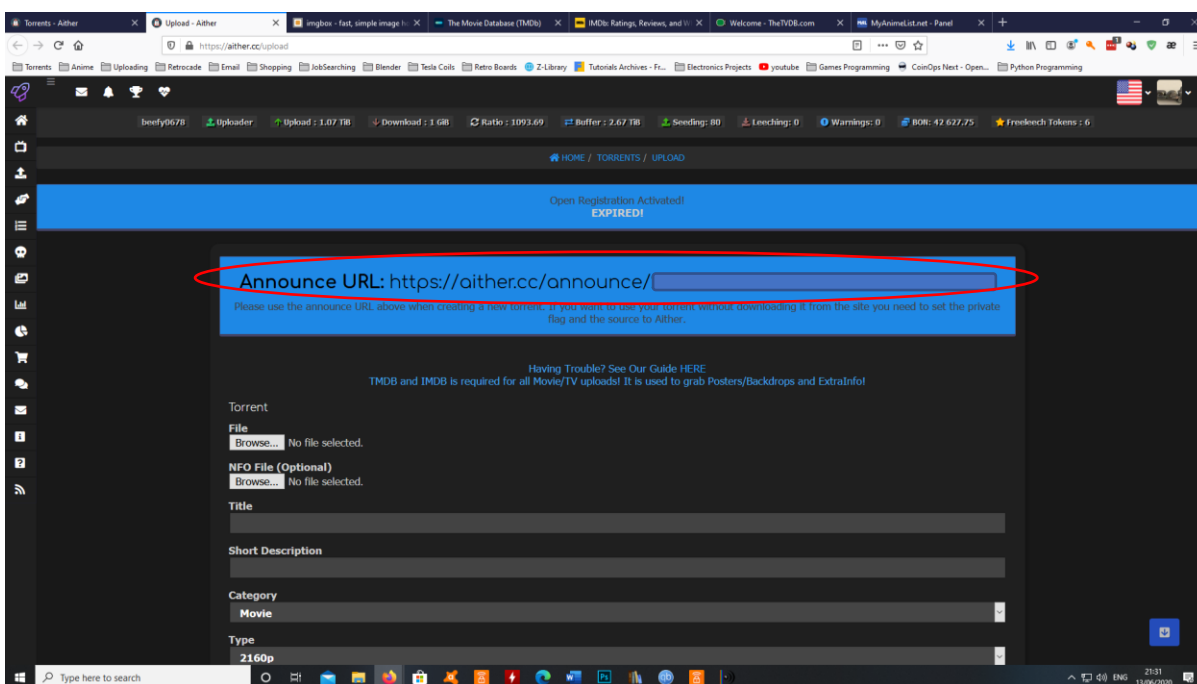

Try to remember, there are only around 10 steps to make an upload this way, I just waffle a lot so it makes it look more!

## Let's get started!

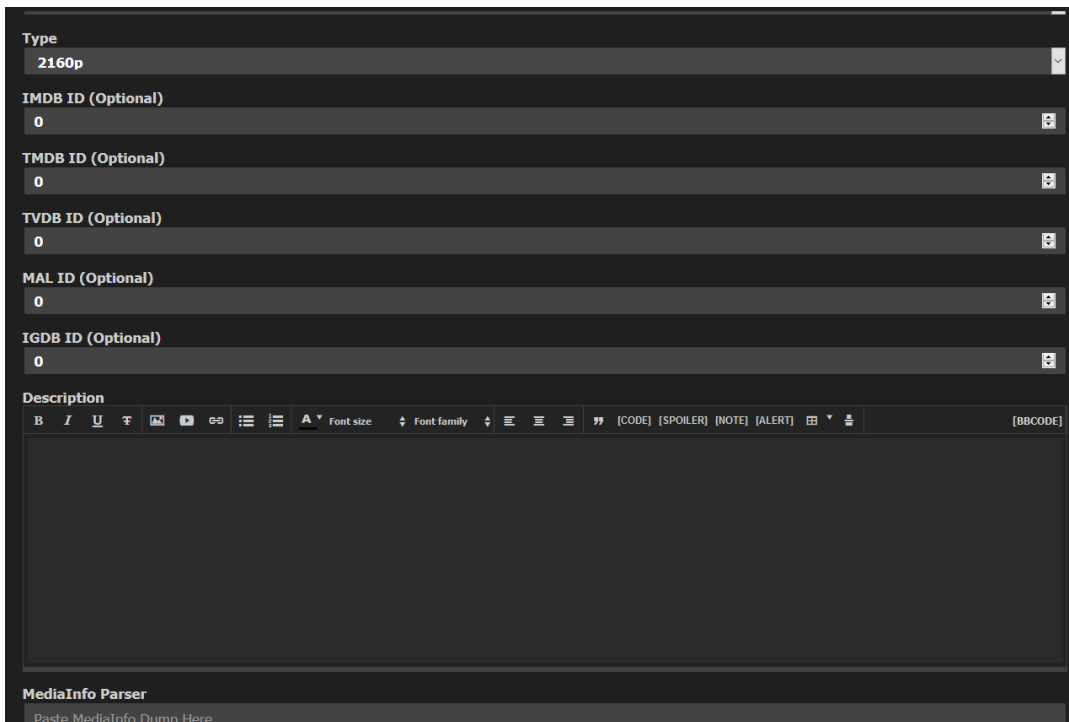

Try to get everything ready that you need to create the upload page. For example, here I have got all the tabs open that I will need. I have got the blank upload page, imgbox for my screenshots but you can use any image hosting site you want to as long as they can make thumbnails and also remember that they should be free and you don't need to register with any of them, so if they ask for money then stay well away! (Just avoid photobucket completely!) Next tabs are IMDB, TMDB, TVDB and MAL (MyAnimeList) so depending on what I am uploading everything should be at my fingertips! If you are uploading a game then the only one you will need will be IGDB, but as I am using a film as an example I haven't included it.

The first page I need is the upload page. At the top you can see your own personal announce URL (I have blanked mine out so you can't use it!). You will need this when you create your torrent so that the tracker knows where to look for the files and who to give the upload credit to. Underneath that there is a button to browse for the .torrent file you will create. Next is a browse button for an NFO file (Not every torrent will have or need one so don't worry if you can't find one). Then we have the Title followed by the Short Description field (Don't worry about this one either, it is only used if your torrent has multiple languages to list which ones are included which is usually with anime). Next is the 'Category' field which is a drop-down menu with items like Movie, Software, Music etc.

The next field is the 'Type' field, which is a sub section menu for the first field you selected, for instance if you select 'Movie' from the first field then for then 'Type' field you might select '1080p'.

The next 5 Fields are for the database fields. These are IMDB (International Movie Database), TMDb (The Movie Database), TVDB (TV Database), MAL (My Anime List) and IGDB (International Games Database). The links for these will be found on the sites themselves when you do a search for the item you are looking for and you will add the numbers to help fill in the data on the torrent page.

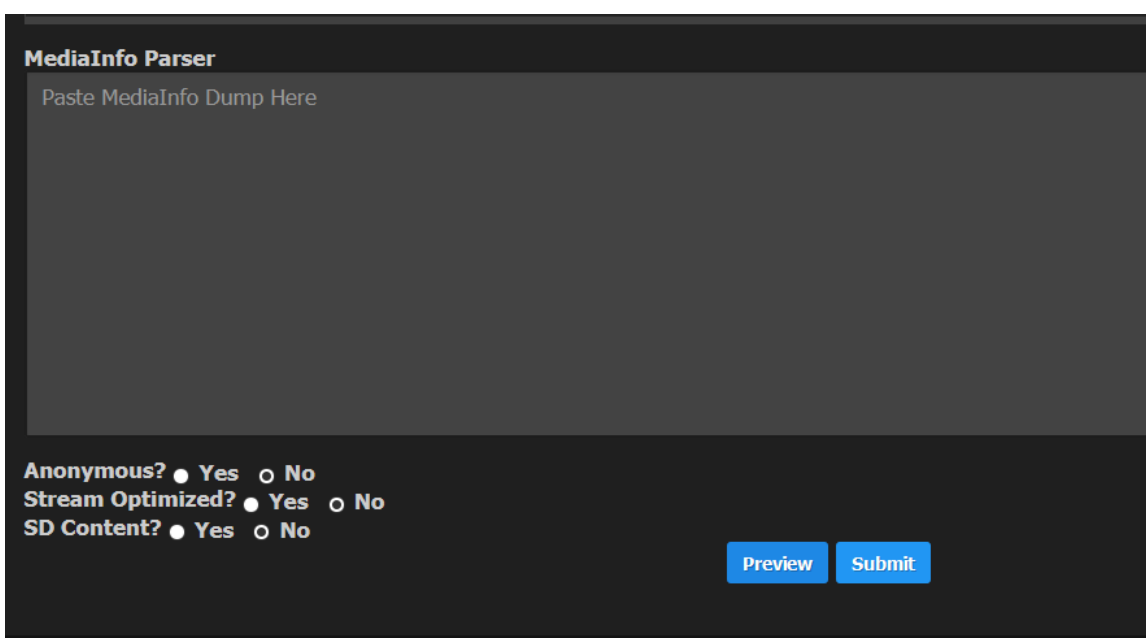

The screenshot shows a dark-themed form with the following elements:

- Type:** A dropdown menu currently set to "2160p".
- IMDB ID (Optional):** A text input field containing "0".
- TMDb ID (Optional):** A text input field containing "0".
- TVDB ID (Optional):** A text input field containing "0".
- MAL ID (Optional):** A text input field containing "0".
- IGDB ID (Optional):** A text input field containing "0".
- Description:** A rich text editor with a toolbar containing icons for bold, italic, underline, link, unlink, image, video, code, list, and font settings. It also includes BBCode tags like [CODE], [SPOILER], [NOTE], [ALERT], and a [BBCODE] placeholder.
- MediaInfo Parser:** A section with the text "Paste MediaInfo Dump Here" and a large empty text area below it.

Under these is the Description box which is pretty self-explanatory, here you will add a short description of the torrent you are uploading and if it is a film or TV series then you need to add at least 3 screenshots which I will show you how to do later.

The last box is the MediaInfo Parser box, this is where you add the information you will get from MediaInfo.

Lastly there are 3 check boxes, 'Anonymous' which you can check if you don't want your name next to the torrent, 'Stream Optimized' just leave unchecked, and 'SD Content' which you can check if the torrent is Standard Definition (under 720p resolution).

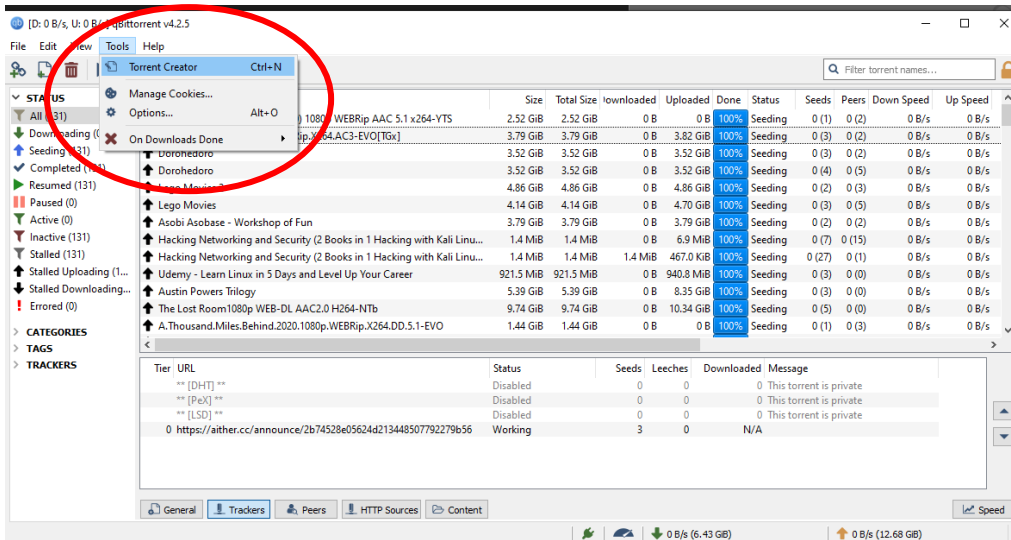

This screenshot shows the bottom portion of the form:

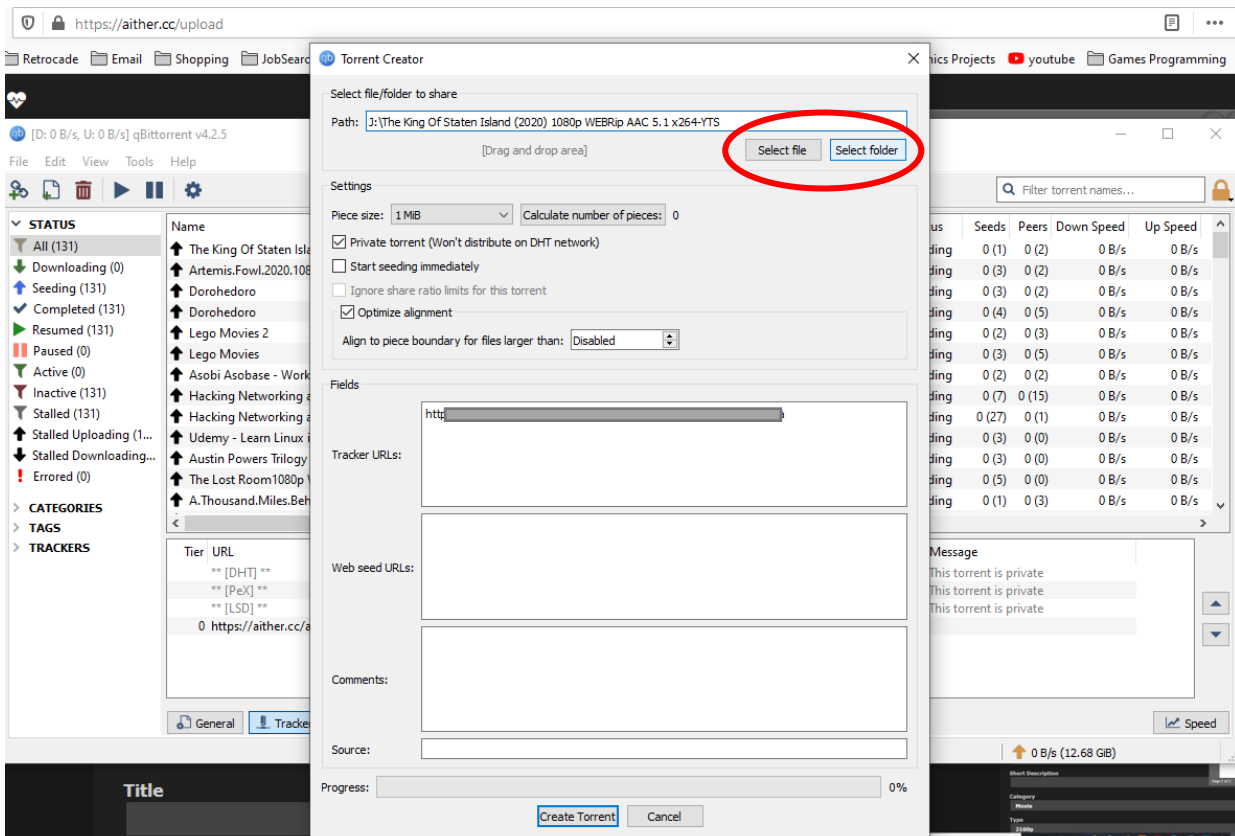

- MediaInfo Parser:** A dark grey box with the text "Paste MediaInfo Dump Here" and a large empty text area.
- Form Controls:** Three rows of radio buttons:
  - Anonymous?  Yes  No
  - Stream Optimized?  Yes  No
  - SD Content?  Yes  No
- Buttons:** Two blue buttons labeled "Preview" and "Submit" are positioned at the bottom right.

# Creating your .Torrent file

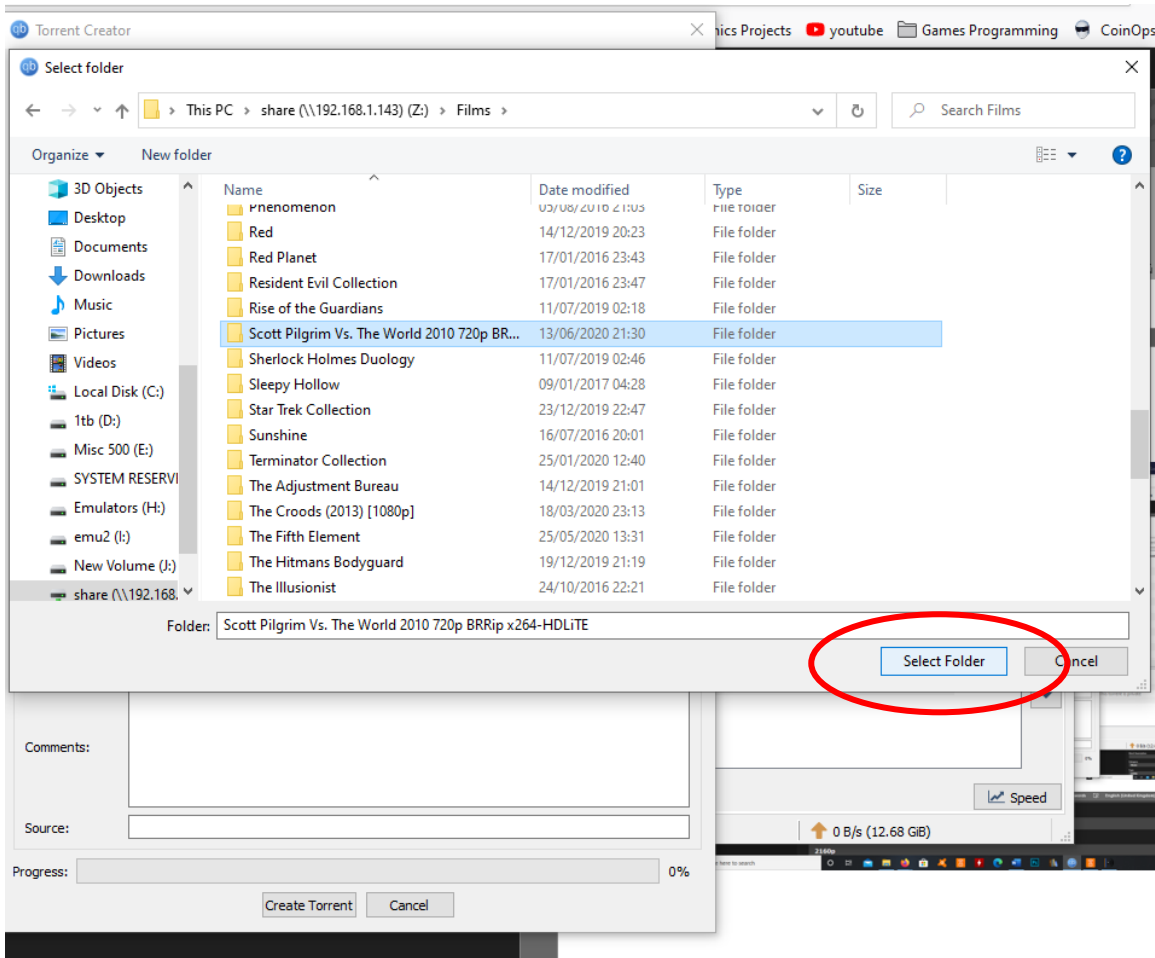

1. Open up your torrent client and select 'Tools' then 'Torrent Creator' (I am using Qbittorrent so it might be under something different for your client).

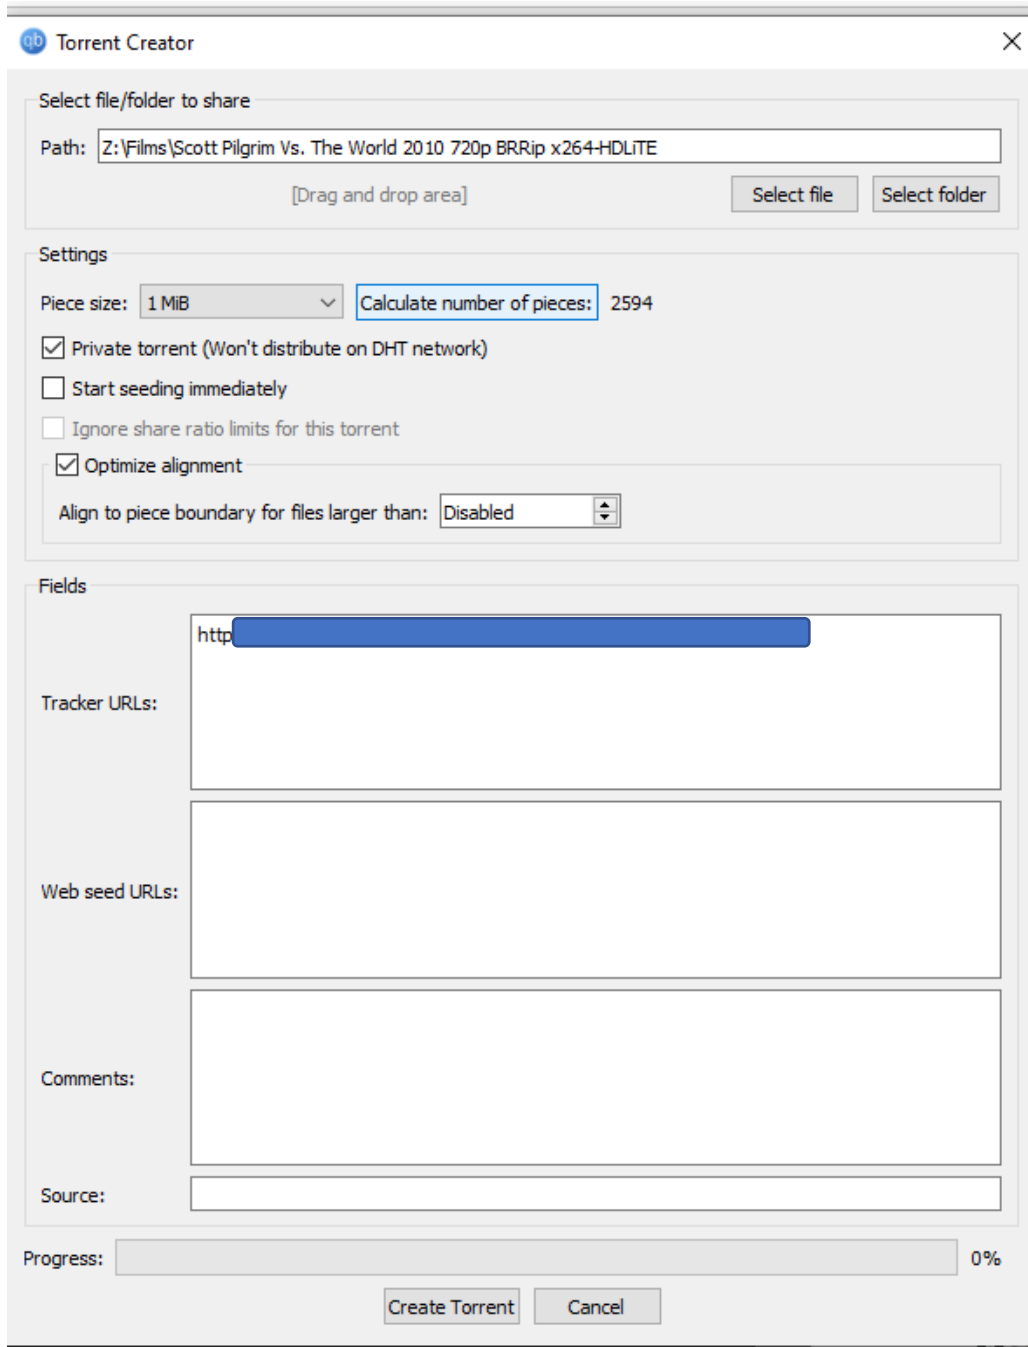

2. You will get a page that looks something like this one below. I am uploading a film that is in a folder so I click the 'Select Folder' button.

- It brings up an explorer window and I highlight the folder I want to upload and click 'Select Folder'. If I was uploading a single file then I would click 'Select File'.

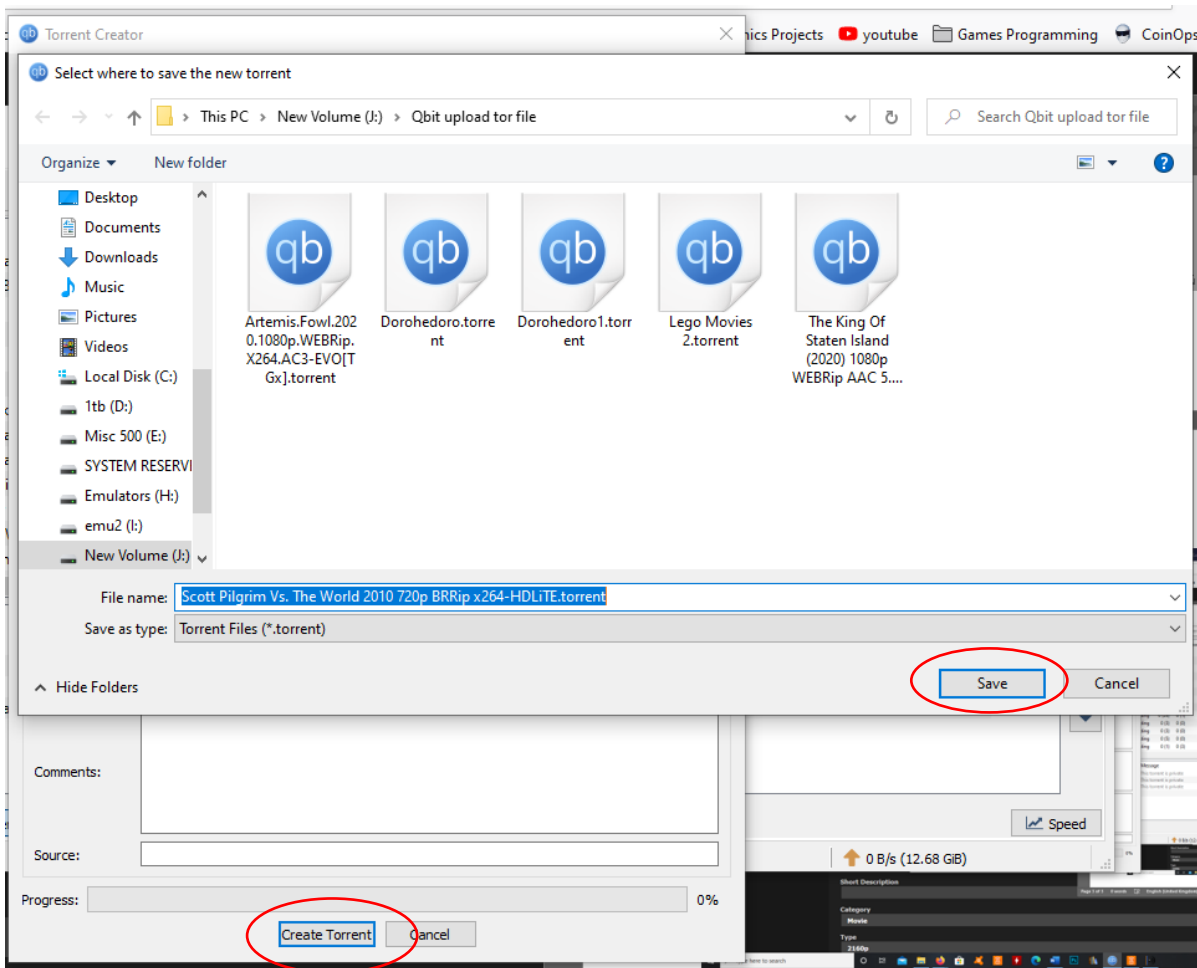

4. It has filled in the path to the folder I want to create the torrent from now and I can check that the rest of the page looks correct.

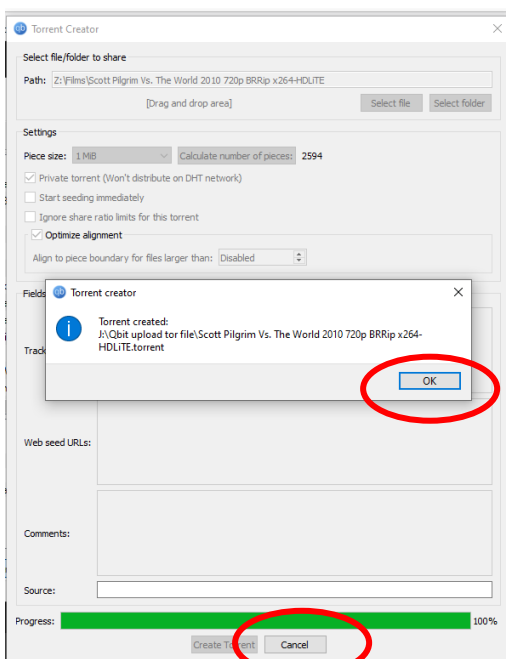

5. Under 'Settings' It says 'Piece Size' you can just set this to automatic if you are unsure of what you are doing with this if you want. I have set it to 1MB for mine, if you are doing it manually you want to have around 3000 pieces, torrents work better with that amount usually. But 'Auto' is perfectly fine too if you don't want to mess with the settings.
6. Then make sure that 'Private Torrent' is checked, this is a MUST.
7. Next **UNCHECK** 'Start Seeding Immediately'. This is also a MUST or it will make everything slightly harder later on.
8. Now where it says 'Fields' you need to add the Aither tracker URL, this can be found at the top of the upload page in the blue bar of the upload page where it says 'Announce URL' (in the first picture of this guide). This is your own unique number which is why I have blocked mine out! If you used mine then I would get all the credit for your hard work lol.

9. That should be it so you can now press the 'Create Torrent' Button and it will ask you where you want to save the .torrent file to. Choose somewhere memorable, you don't want to spend half an hour hunting it down after you have made it lol.

10. Once it has finished it should look something like this. You can go ahead and click 'ok' then close down the torrent creator screen.

# Adding the information to the upload page

Ok, so now we need to start adding all the information to the upload page to create the nice-looking torrent.

1. Click on the 'Browse' button directly underneath where it says 'File' and direct it to the .torrent file we just created. As you can see after we selected the file, the name auto populates under the 'Title' box so if it has got all the correct details in it you need, then you can leave it as is. But usually you will have to add or remove something. Movies are easy to name, you just put the movie name, year, resolution, source (BluRay, WEB-DL etc.) Audio codec and video codec then a dash (-) and then the encoder. As you can see mine was missing the audio codec so I checked with mediainfo what it was and added it in as per the next picture.

Please use the announce URL above when creating a new torrent. If you want to use your torrent without downloading it from the site you need to set the private flag and the source to Aither.

Having Trouble? See Our Guide [HERE](#)  
TMDB and IMDB is required for all Movie/TV uploads! It is used to grab Posters/Backdrops and ExtraInfo!

Torrent

Movie

**Type**  
2160p

Audio added...

**NFO File (Optional)**  
 No file selected.

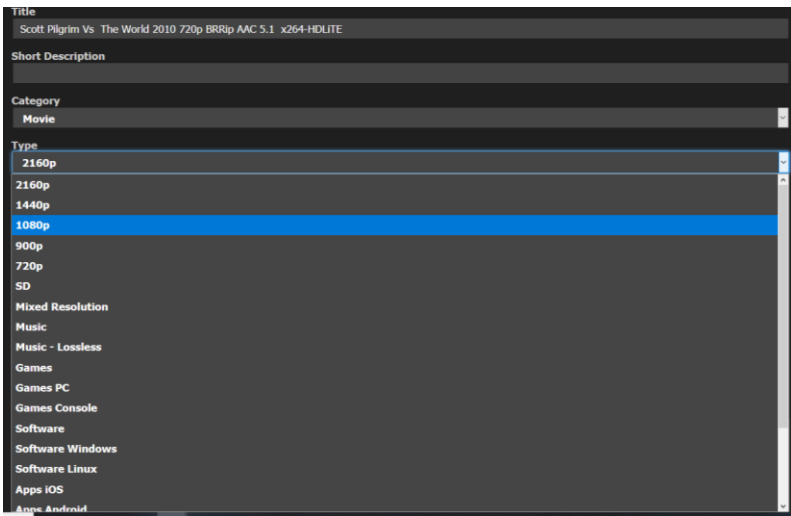

**Title**  
Scott Pilgrim Vs The World 2010 720p BRRip AAC 5.1 x264-HDLITE

**Short Description**

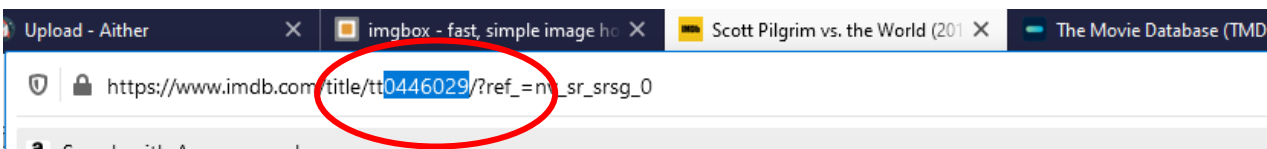

**Category**  
Movie

**Type**  
2160p

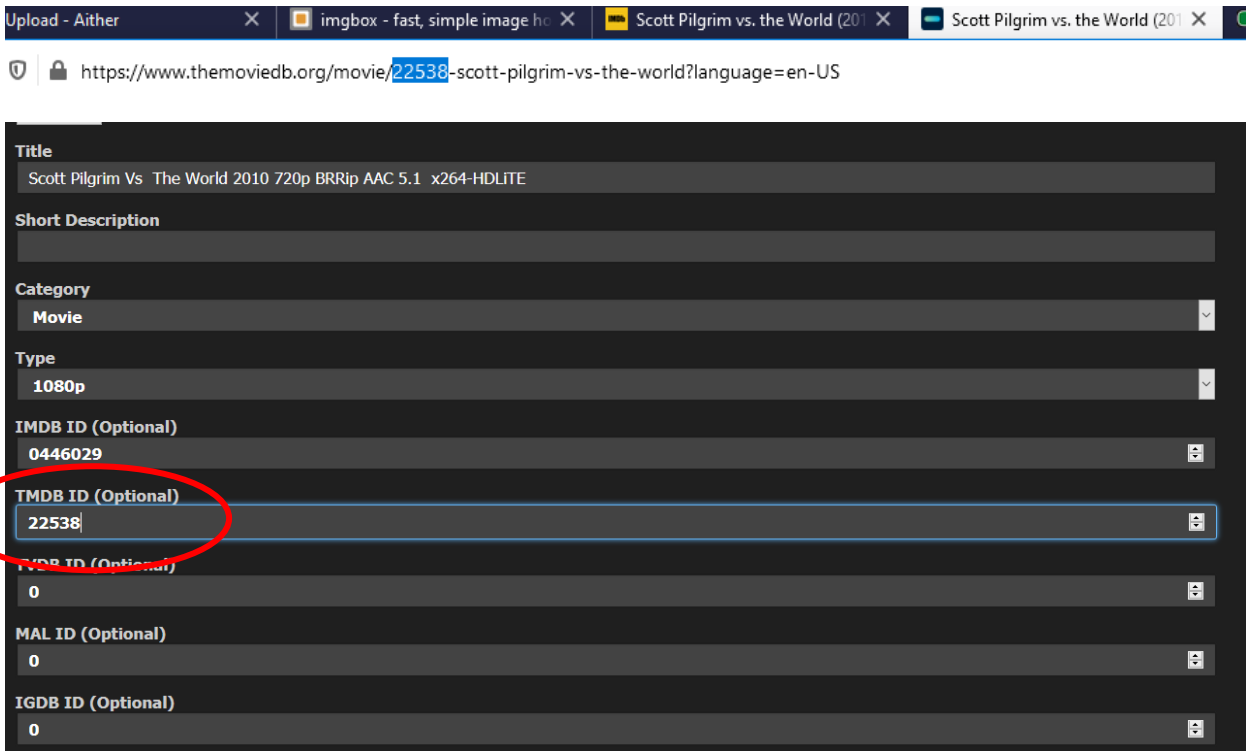

- Next is the 'Category' but I am uploading a film so I have left it as movie. Then comes the sub heading 'Type' so I clicked on that and chose 1080p. Yes I know this was wrong and after I finally made the torrent I had to edit it from the torrent page which is no problem, there is a little edit button available to the torrent uploader, so just don't worry about making mistakes, they can all be rectified later on! The only thing that can't be changed later on is the actual .torrent file you create at the beginning so if that is wrong then you need to delete the whole thing and start again so try to make sure you get it right!

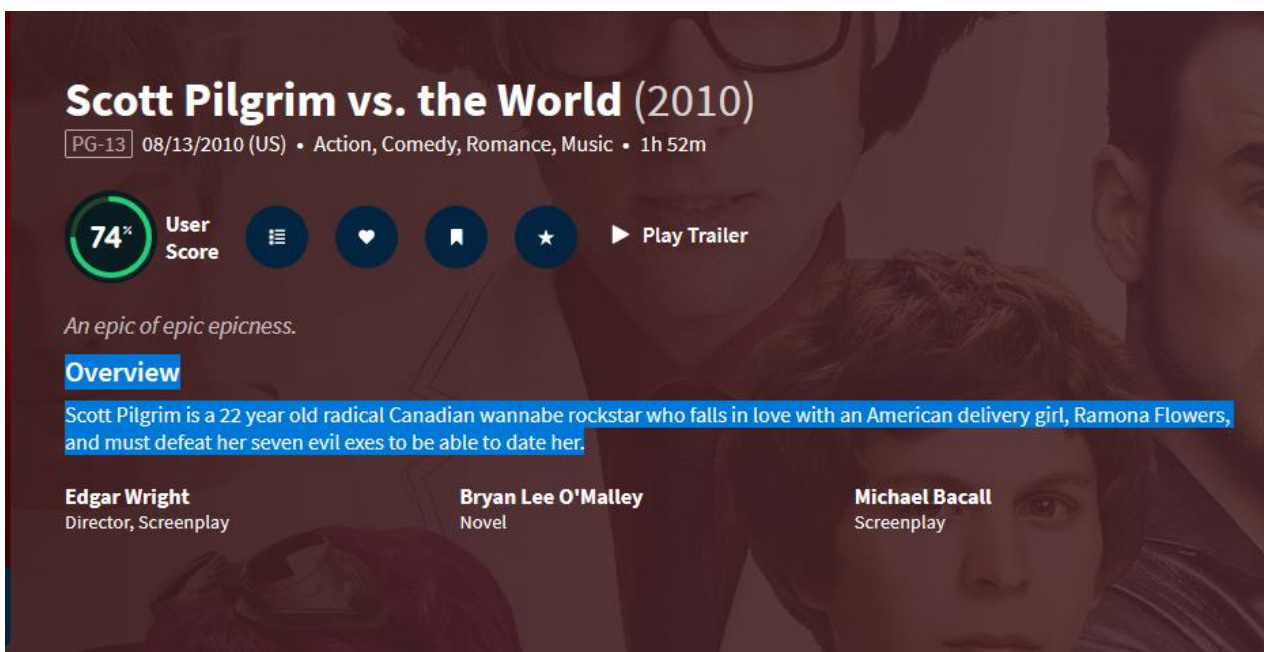

- Time to add the database numbers. Go to the IMDB tab and search for the movie you are uploading. At the top in the address bar there are some numbers with tt in front of them. Ignore the double t and just copy the numbers. Paste them back into the upload page. Making sure to paste over the 0 that is already there, if you leave this in then it will cause an error.

- Then the same with TMDB, except this time there are no letters in front of the numbers, so just copy/paste.

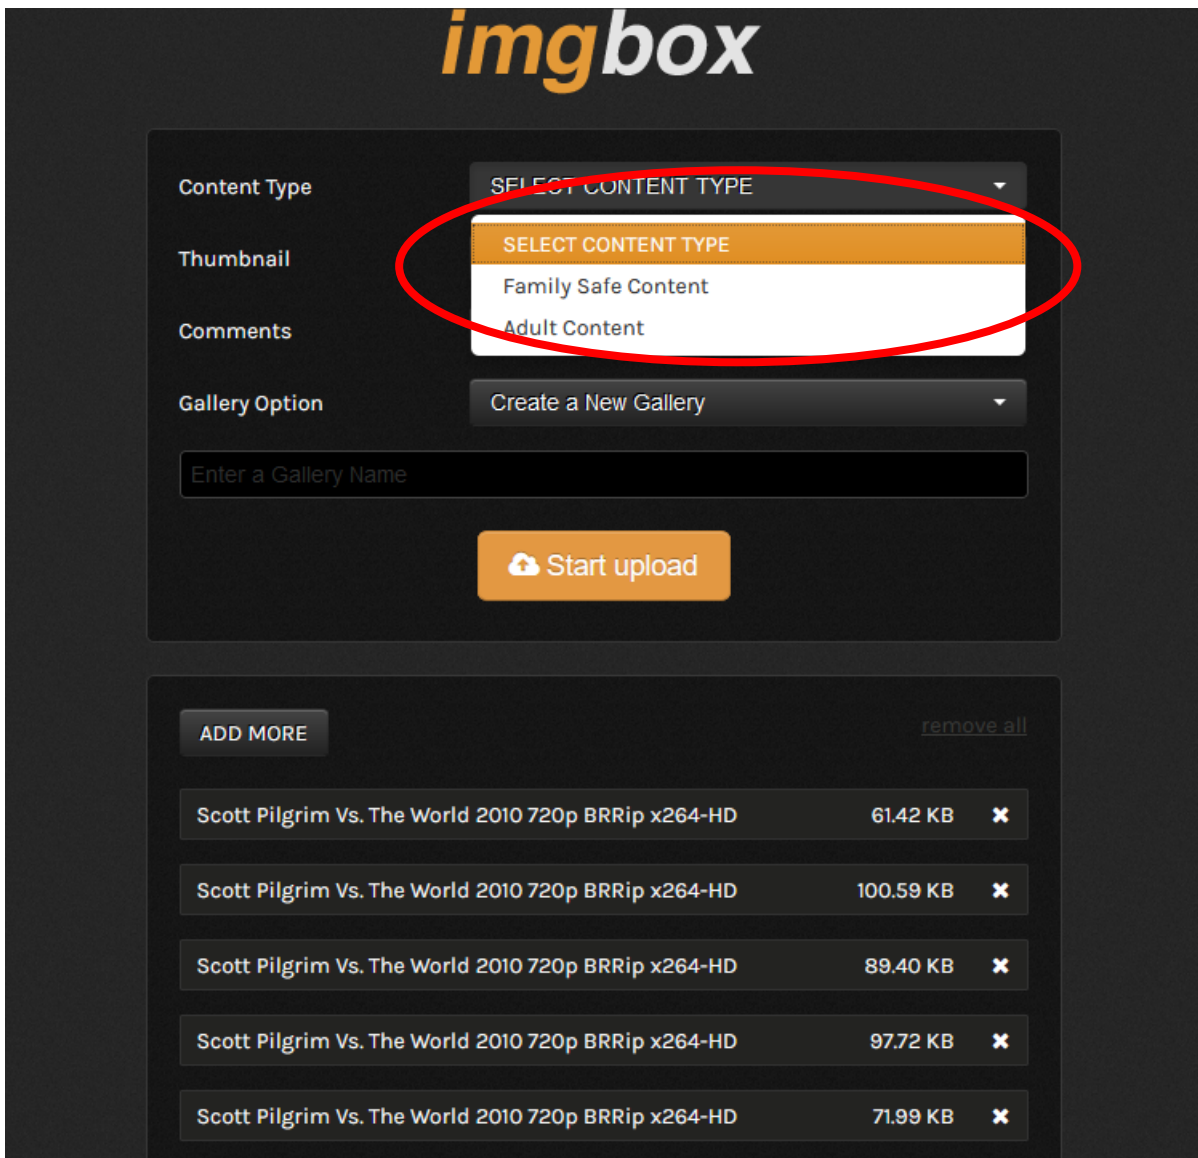

- If you are uploading a TV series then also add the TVDB numbers. For Anime then also add the MAL numbers. But for a game you can forget about all of them apart from the IGDB number which is a right pain to get. First of all go to the IGDB site and find the page of the game you are upping, then press ctrl+u, press ctrl+f, then find the search box that should of appeared at the bottom of the page and type "game\_id=" (without the "") and find the highlighted text. The number you need should be next to it! Again, copy/paste this number into the upload page.
- Next, we need some info in the description box. So, go to one of the sites, either IMDB or TMGB and copy the synopsis/overview, paste it into the description box, then press return a few times and write 'Screens:' and add a few lines under that.

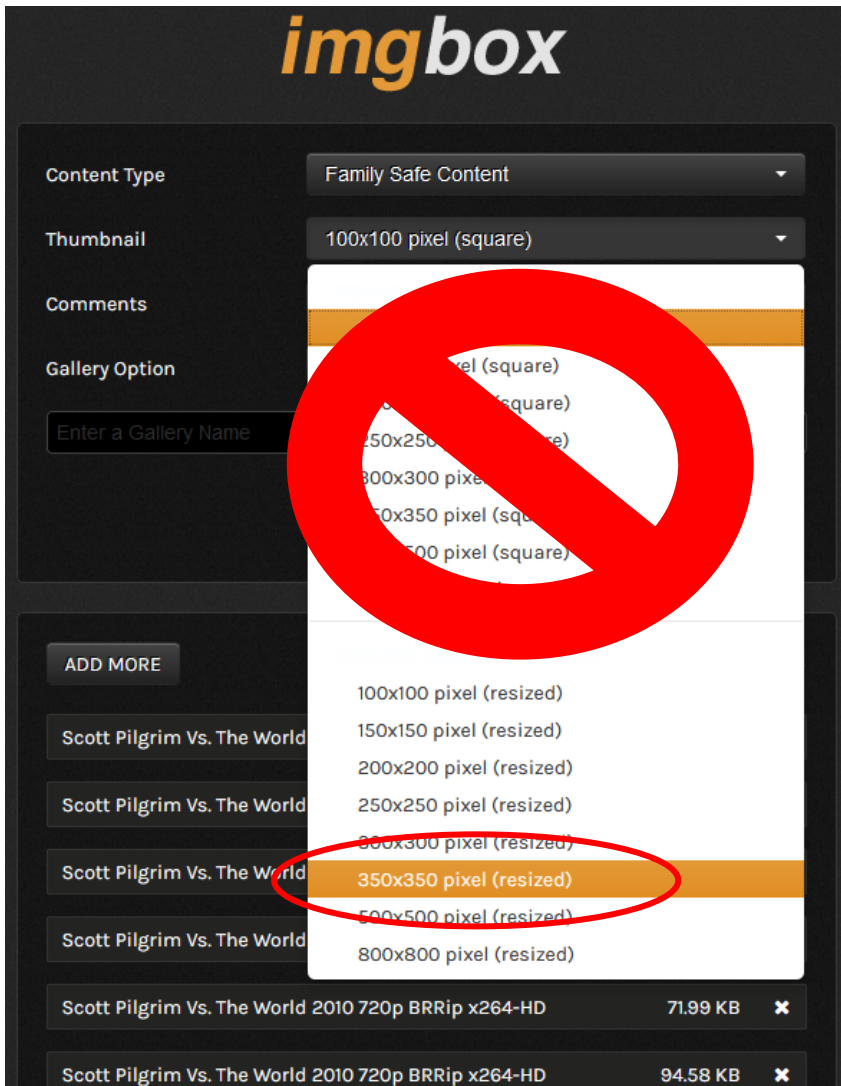

8. On the next page click 'Select Content Type' and it will ask if they are family safe, so if they are click yes, otherwise no.

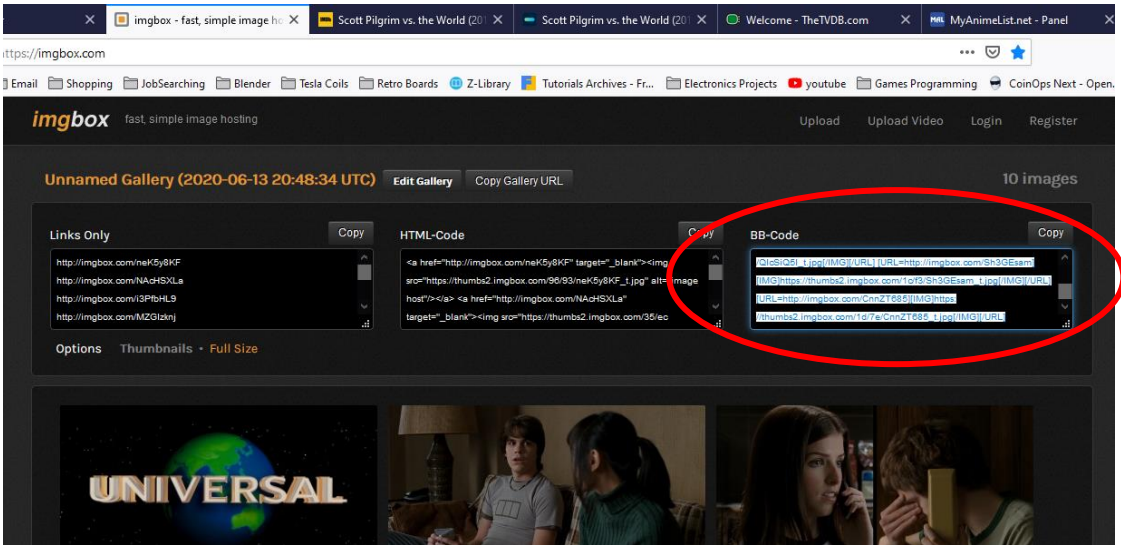

9. Then it will ask what size thumbnail you want. Choose 350x350 resized NOT Square.

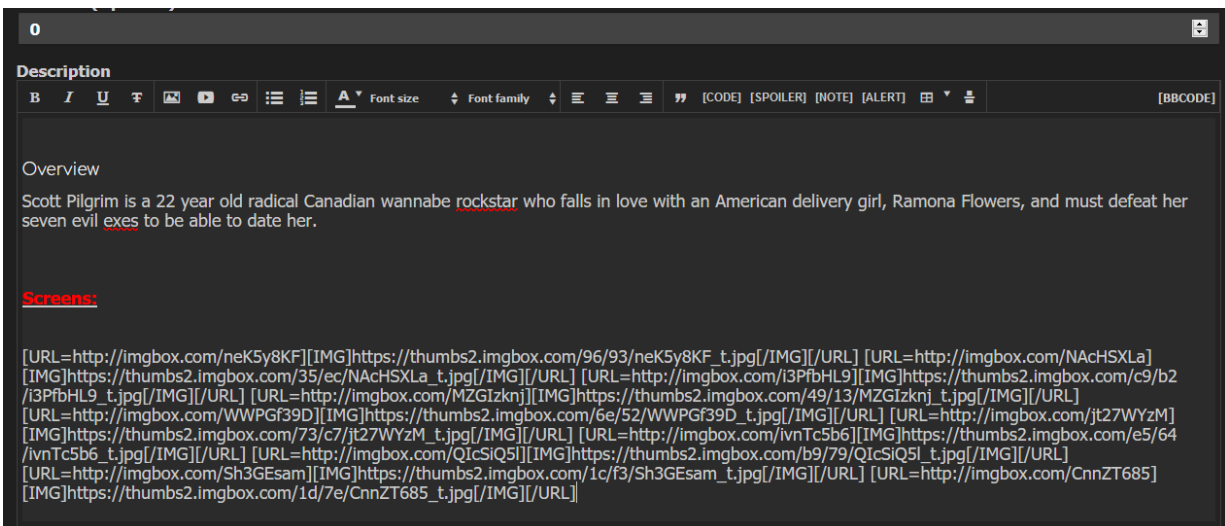

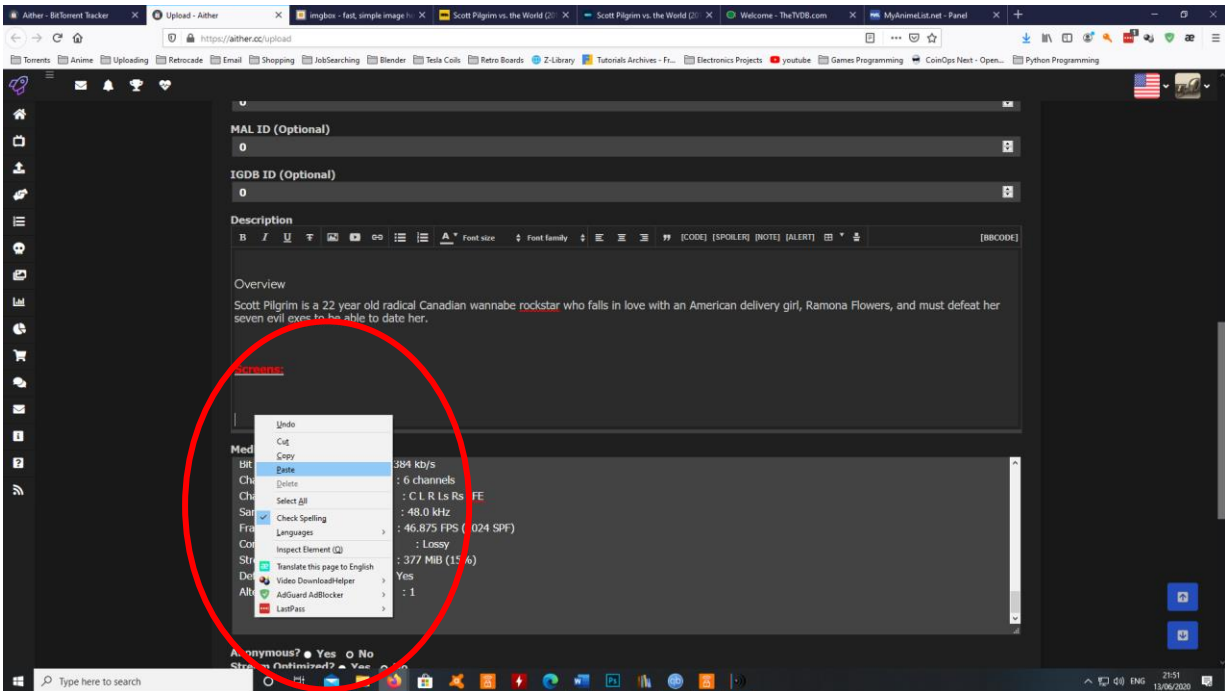

10. Then just click start upload

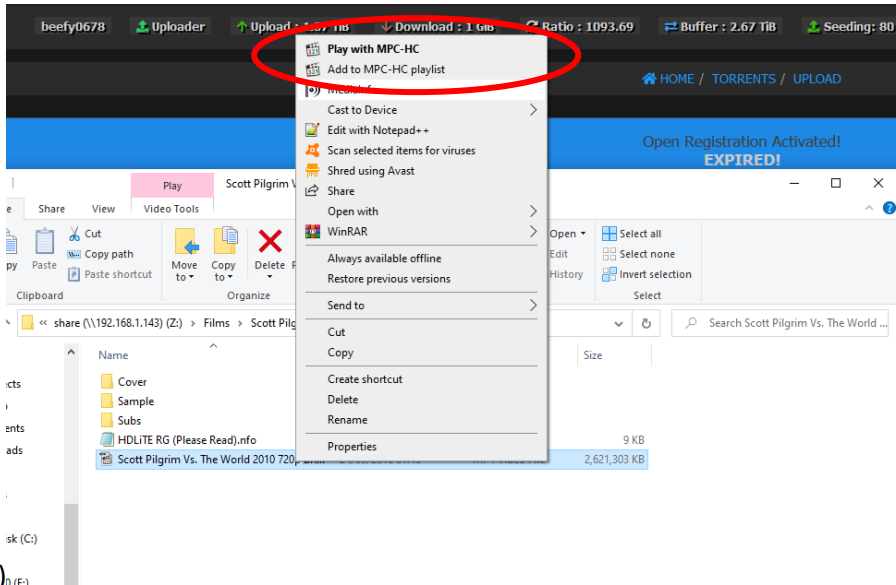

11. When the pictures are done uploading select the text in the right-hand box that says BB-Code and copy it all.

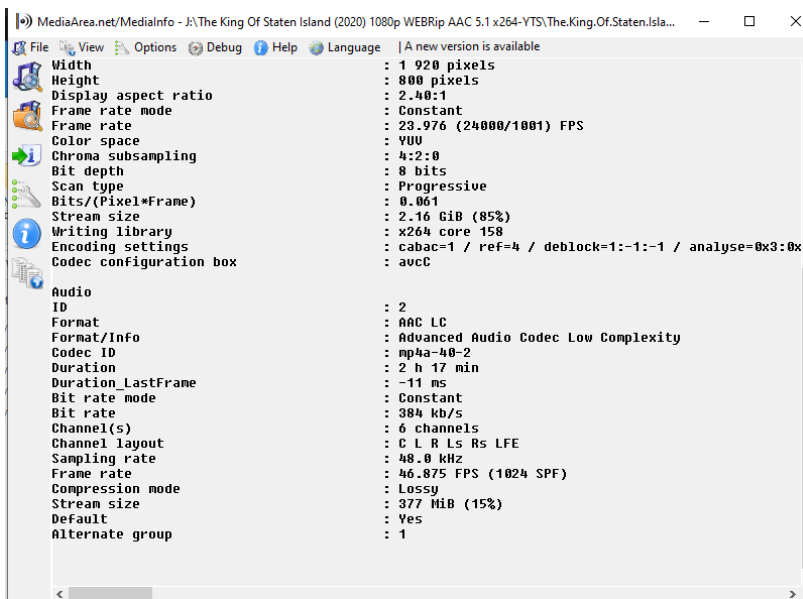

12. Paste it in the Description box under where you wrote 'Screens:'

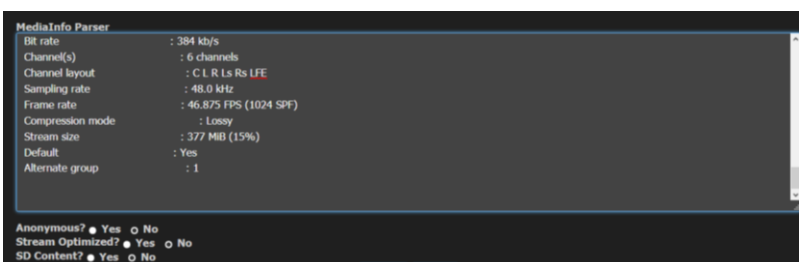

13. Next, we need the mediainfo for the video file so find the original file and right click on it and select mediainfo (you need mediainfo installed for this first, it is free and comes in very handy!

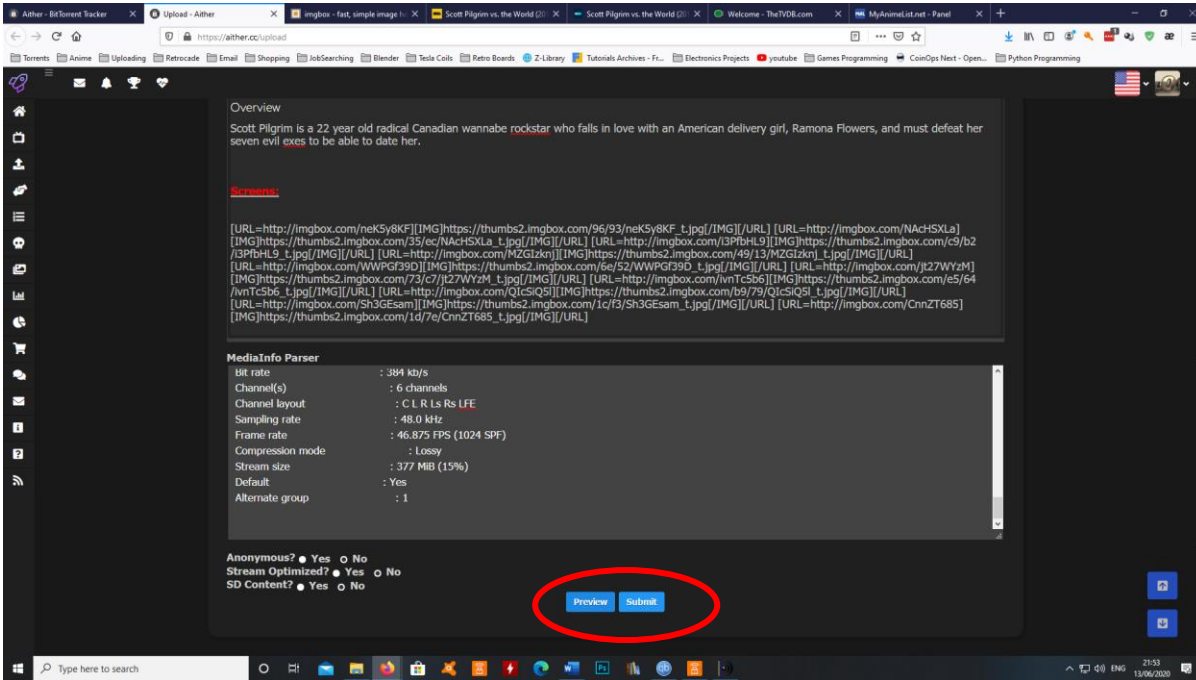

14. Make sure you have got mediainfo view set to 'TEXT' and then copy all the text and paste it into the mediainfo parser section at the bottom of the upload page. (Press Ctrl+A to highlight all the text then right click on it and copy)

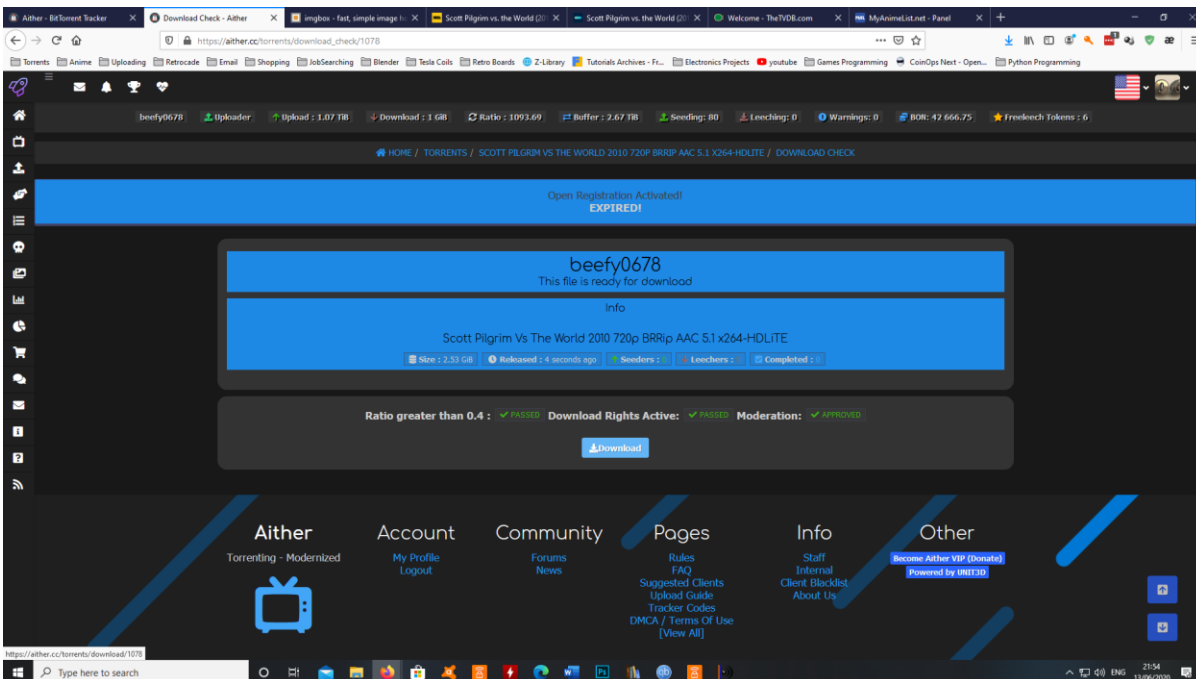

15. Then just paste into the Mediainfo parser section.

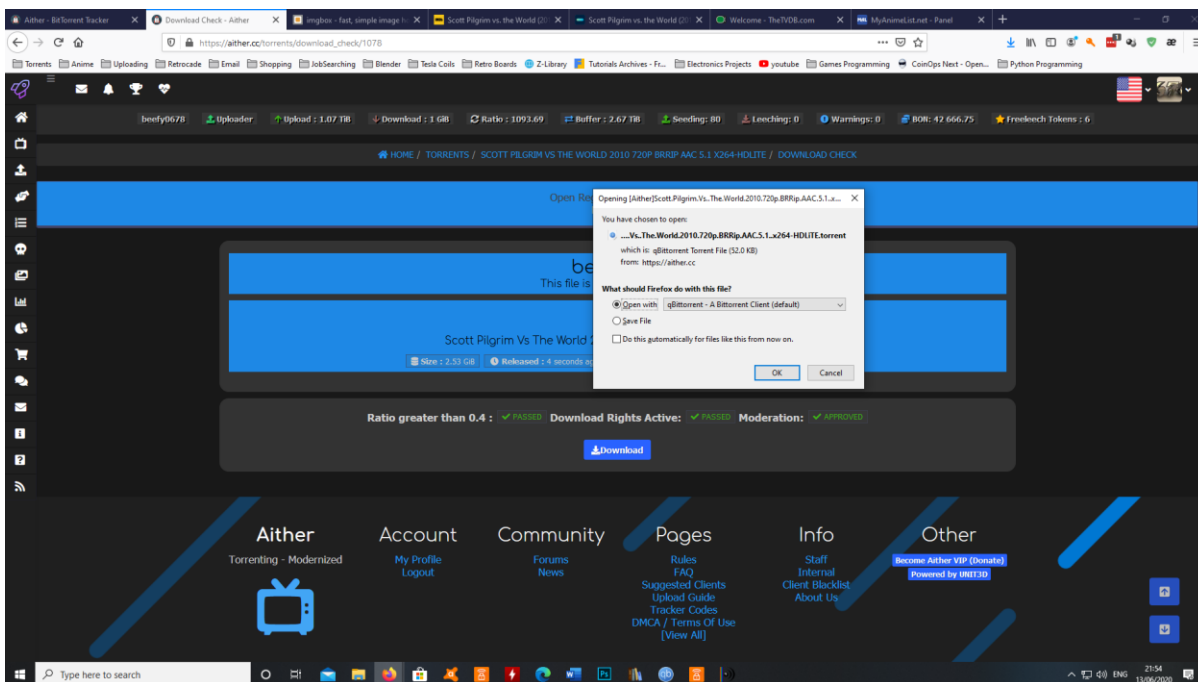

16. Now we should be all done so double check that everything is filled in and when you are as sure as you can be that you have got it right click 'Submit'.

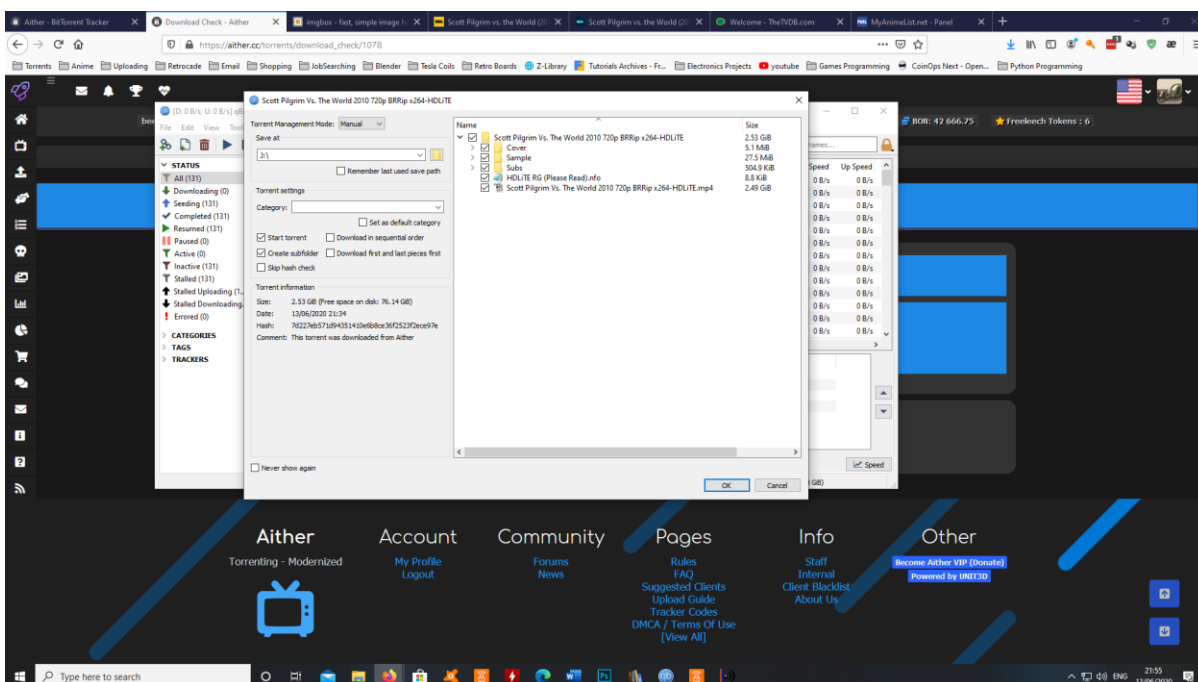

17. This will load the next page if all has gone right! Click the download button and add the torrent back to your torrent client so that it can check the files and start seeding when it is ready!

18. Don't forget to point the torrent to the folder your original files are in or else it will try to download instead of seed! So if you have added the torrent and it just sits there in your client at 0.0% saying downloading then you have directed it to the wrong place to find the files, just delete the torrent, re-download it and try again making sure to direct it to the correct place.

19. If everything is good then it should start checking the files as you can see below. If it doesn't and says it is downloading then you have pointed it to the wrong location. Just delete the torrent and download it again until you find the right location! Once it has finished and reached 100% it should say seeding! Congratulations!

20. If you still can't add it then please ask one of the staff or even any uploaders or members for help, most of them are pretty knowledgeable and shouldn't hesitate to help you out!

I hope these instructions haven't been too hard to follow and If I have made any mistakes then please let me know so I can alter them, thanks!

# On Another Note...

## Naming (General):

- Do not use any special characters or non Latin characters within title or any of your torrents.
  - Provide the Crew/Ripper name at the end with a dash "-" prefix. No Spaces please eg. "x265-FROZEN", not "x265 - FROZEN".
  - Porn / Erotics must include a "XXX" within the Torrents name. It is porn as soon as its tagged on TMDB as porn or not listed on TMDB.
  - If it contains real sex, but isn't a porn, add "18+" into the "Short Description"
- 

## Naming (Examples):

### Movies:

Title Year Resolution Source AudioCodec Channels VideoCodec-Crew

Brackets for year allowed for movies with number as title.

- Black Hawk Down 2001 1080p BluRay DTS-HD MA 5.1 x264-VIAHD
