

# Android Apps Enumeration

Suppose, our target has an android app published in the Google Play Store or App store.

To enumerate it for known vulnerabilities, required permissions and overall assets in use, we will use this specialized search engine called Bevigil.

It is like Shodan but for the mobile apps.

So, from the starting of this section we have taken our target as - Zomato. So, we will stick on to it.

Let's see what its apps hold for us.
